Candidate Selection

- Common western music notation capabilities (no pure sequencer)
- WYSIWYG

- In active development
- Runs on OSX
- Open-Source Software

 ssmn

- Spatialization Symbolic Music Notation

2013

MuseScore

- Has an active community: 3 devs working full-time on it
 - Qt based (-> OOP, cross-plattform joys and tears)
 - internal synth: fluid
 - Jack for midi output
 - OSC capabilities for remote-control
 - *.mus file format XML-based
-
- MuseScore 1.X vs 2.X

ssmn

- Spatialization Symbolic Music Notation

2013

MuseScore + SSMN => MuseScoreSSMN

- UI integration as natural as possible
- No plugin interface
- Extending an evolving software
- Keep the extension as separate as possible

2. Descriptors of sound sources (2D/3D)

a. Types of sound sources

i. Sound points (M)

1. Physical sound source - root sound (acoustical)

.		- Label (Name)
---	--	----------------

2. Projected audio signal* (PA)

⊗		- Label (Name)
---	--	----------------

* Microphone signal, audio files, streamed audio

ii. Groups

Definition: A group is a collection of sound points with common spatial features. A group is defined by a circular perimeter wherein the single elements can be found. Position and movement of single elements within the perimeter can be defined in the same way as single points.

1. Physical sound sources

x		- Label (name of group) - Number of sources - Diameter - $x_{yz}(1)$ or $x_{yz}(1)$ (coordinates of point 1) - $x_{yz}(n)$ or $x_{yz}(n)$ (coordinates of point n)
---	--	--

2. Projected audio signal

		- Label (name of group) - Number of sources - Diameter - $x_{yz}(1)$ or $x_{yz}(1)$ (coordinates of point 1) - $x_{yz}(n)$ or $x_{yz}(n)$ (coordinates of point n)
--	--	--

iii. Planes

Definition: A plane is a homogenous sound spread out in space - often a stereo sound field (ex. motorway)

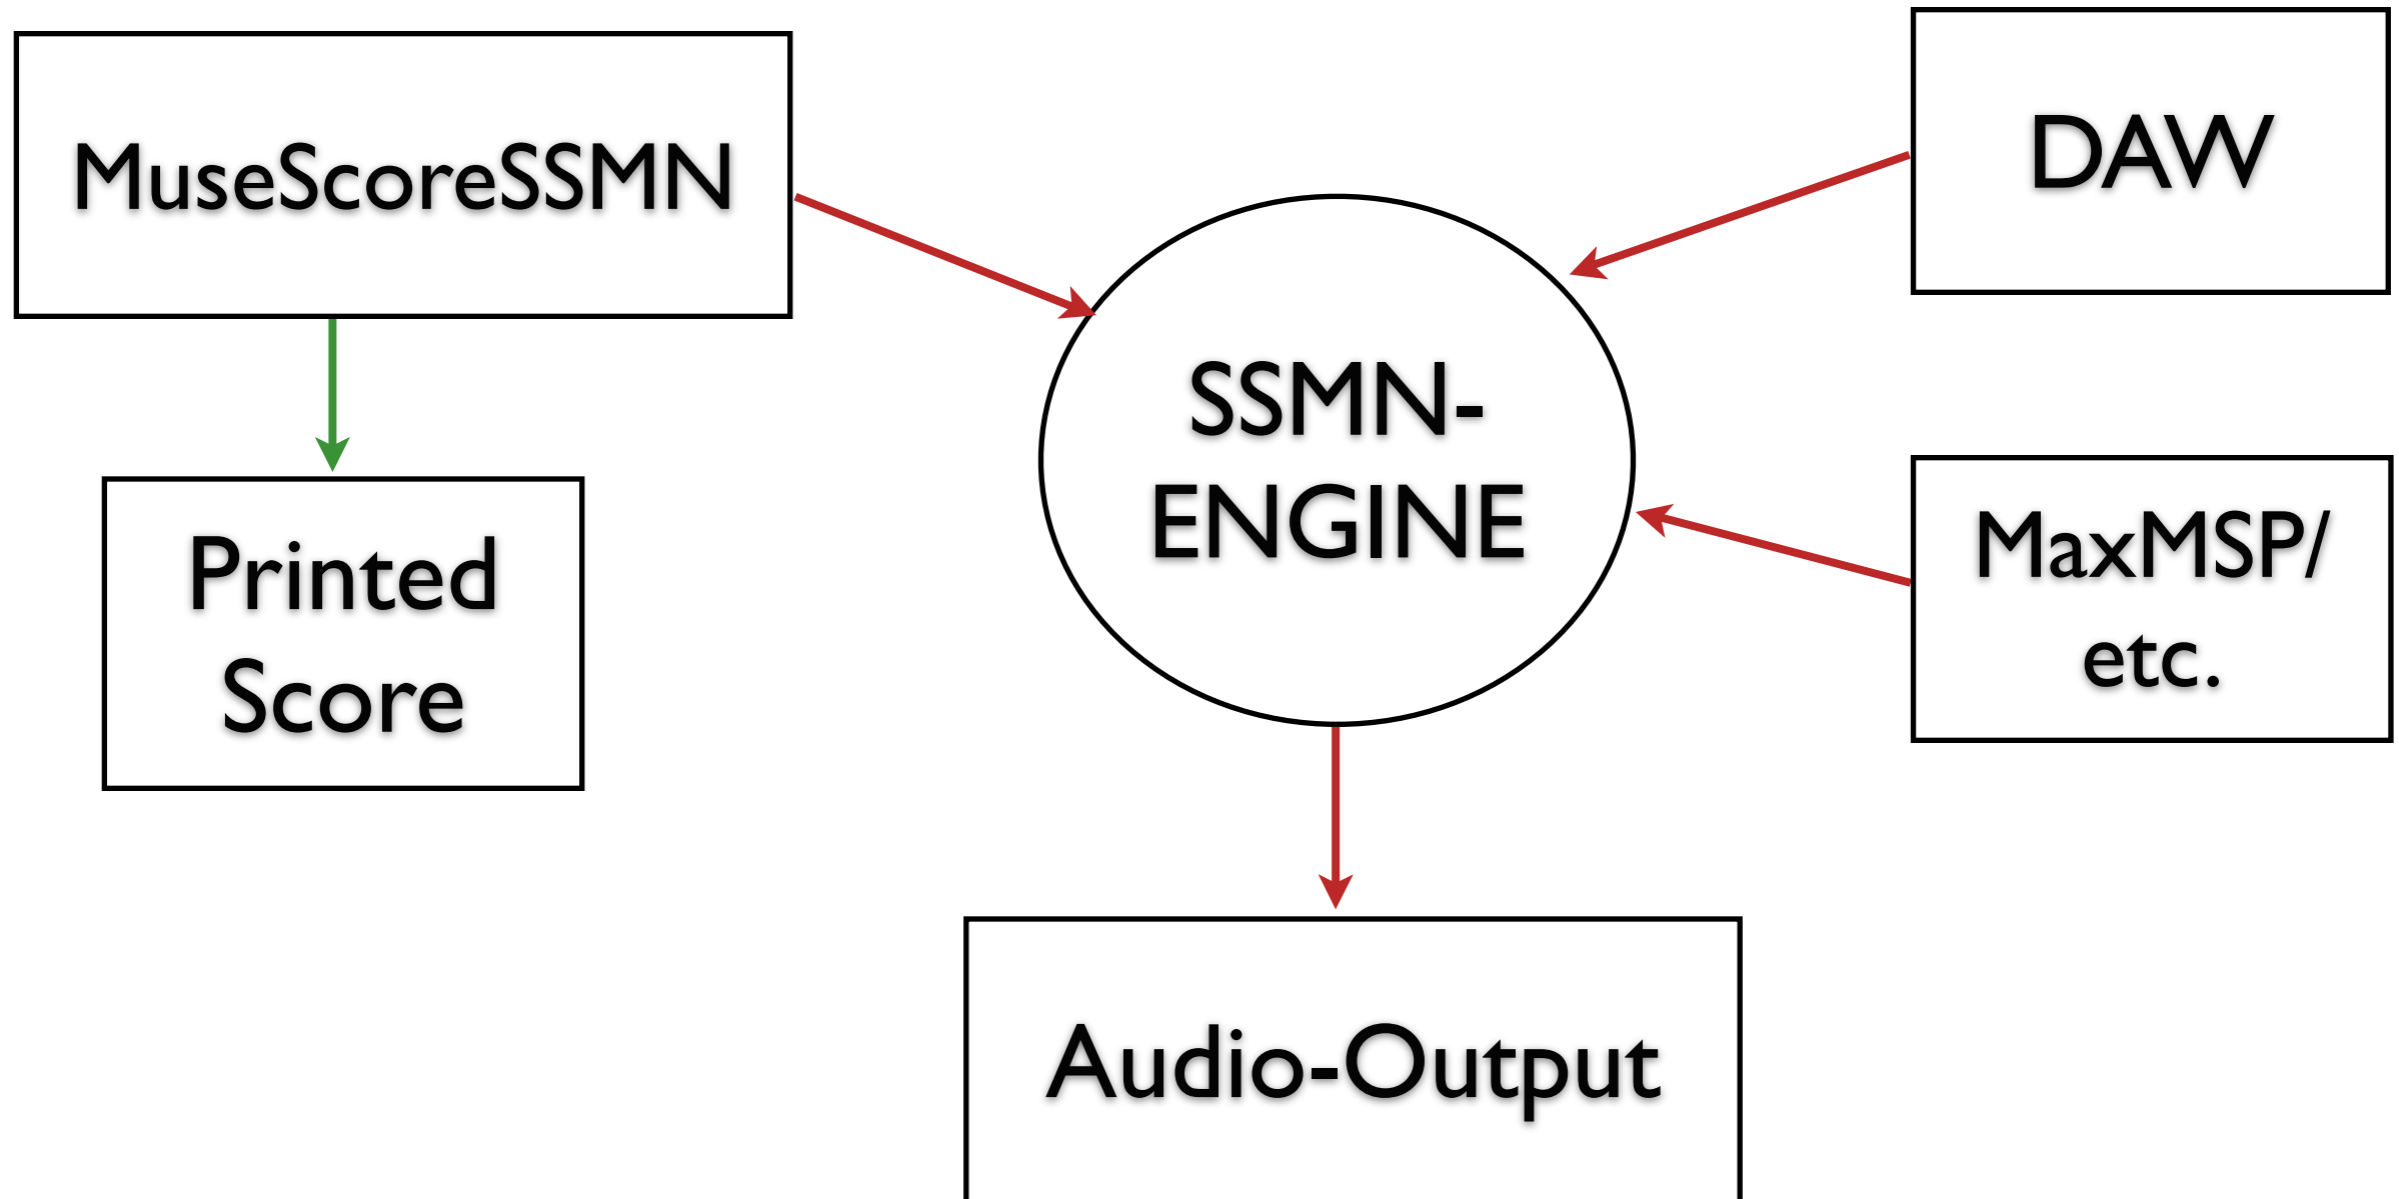

1. Projected audio signal

		- Label (Name) - Number of sources
--	--	---------------------------------------

The screenshot shows the SSMN-Rendering-Engine interface with several key sections:

- Inputs:** A piano roll view in the top-left corner labeled "/meters-input".
- Routine:** A central control area with buttons for "open-Sampler", "open-audiotest", "open-settings", "open-speakers", "open-bf3_rec", "open-binaural", "open_5.1_VST", and "open-audio-routing". It also includes "Audio-Routing" (ambisonic, stereo, 5-1, binaural) and "Midi-ctrl." (nanoKONTROL SLIDER/KNO).
- Rendering:** A section for "/decode~" with parameters for Speakers (4), Order (3), and a "/jmod.sur.aux~" section with gain controls for "to_enc/dec", "to record", and "to binaural".
- Audio-outputs:** A section for "/output~" showing CPU usage (28.1%), DSP, Audio On, and a "Record" button.
- Spatialization Settings:** A "dist. / units" slider set to 10.0 and an "OSC-Routing" section with options like "from_MS", "AUAmbi", "AU_to_Extern", and "from_Extern".
- Spatialization-Control:** A large circular spatialization plot on the right with numbered points (1-9) and associated audio parameters (a, e, d).
- Output-Control:** Four vertical sliders at the bottom labeled "Master", "BF-Tape", "Input", and "Binaural" with dB values (-46, -37, -22, 0.00).
